Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PSC Claim 2; Columns 27-30; 28pp; English. CC The present sequence represents a claimed single-chain antibody, cd designated e21[Fv], which binds to erbB-2. Monoclonal antibody e21 CC was generated by immunising mice with N/erbB-2 cells overexpressing CC the gp185 protein, removing spleen cells and producing hybridomas CC monoclonal antibody was isolated and converted to cDNA. Regions CC coding for the heavy- and light-chain variable regions were then CC amplified by PCR and joined via a sequence encoding a peptide CC linker. The resulting single-chain antibody is useful for in vitro CC diagnosis of tumour cells which overexpress the erbB-2 gp185 CC marker, e.g. breast, overian and non-small cell lung carcinomas, CC and, when coupled to a cytotoxic agent, to treat such tumours.	SULT 1 \$186 standard; W15186; W15186; 05-JUN-1997 (fi Single-chain ant Single-chain ant Single chain ant Dreast cancer; o immunodiagnosis; Mus musculus. Synthetic.

The source of human erbB-2 protein for the prodn. of antibodies no 23 and 21 (Q55180/R45442; Q55181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (N/erbB-2). Abs no. 21 and 23 are directed against the extracellular domain of gp185 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs. I animals given a combination of the 2 Abs, tumours completely regressed after 11 days.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-JUL-1994 (first entry)

MAB capable of binding to the gamma chain of the IL-2 recept
thus of blocking the IL-2 response, is produced by mouse byt
line GP-2 (FERM BP-4641). DNA encoding the variable region
this MAB was expressed in E. coli, yielding Fv(GP-2) with
immunosuppressive activity.
Sequence 244 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       region

                                                                                                                                                                                     inhibition of proliferation or survival of, esp. malignant erbB2, realls - by introducing nucleic acid mol. encoding antibody homologue which is expressed and binds, pref. erbB2, protein intracellularly bisclosure; page 29-30; 48pp; English.

A nucleic acid comprises a first sequence encoding a signal peptide (R94019) linked to a second sequence (T17728) encoding a single chain Fv fragment (R94020) that binds a human erbB2 oncoprotein.

The anti-erbB2 sFv portion is obtained by PCR using e23scFv plasmid as template. The signal peptide directs the scFv to the endoplasmic reticulum. The nucleic acid is incorporated into a plasmid or viral vector to facilitate expression of the scFv antibody homologue within e.g. an epithelial carcinoma cell. Intracellular expression of the homologue inhibits surface expression of erbB2 and thereby inhibits cell proliferation and cell survival and decreases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence comprises the L and H chains of murine MAb OVB3, joined together via a linker. The sequence is encoded by clone povB3158-1 in which the 3' end of the DNA is linked to the 5' end of the coding sequence for PE40, a Pseudomonas exotoxin lacking domain I. The protein expressed by the clone can be used to kill specific target cells.

PT cells expressing this protein
PS Claim 2; Columns 25-28; 28pp; English.

CC The present sequence represents a claimed single-chain antibody,
CC designated e23(FV), which binds to erbB-2. Monoclonal antibody e23
CC was generated by immunising mice with N/erbB-2 cells overexpressing
CC the gp185 protein, removing spleen cells and producing hybridomas
CC by standard techniques. Messenger RNA coding for the anti-erbB-2
CC monoclonal antibody was isolated and converted to CDNA. Regions
CC coding for the heavy- and light- chain variable regions were then
CC amplified by PCR and joined via a sequence encoding a peptide
CC linker. The resulting single-chain antibody is useful for in vitro
CC diagnosis of tumour cells which overexpress the erbB-2 gp185
CC marker, e.g. breast, ovarian and non-small cell lung carcinomas,

cc and when coupled to a cytotoxic agent, to treat such tumours.
                                                                                                                       몽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š

                                                                                                                                                                                                                              The source of human erbB-2 protein for the prodn. of antibodies : 23 and 21 (Q55180/R45442; Q55181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (N/erbB-2). Abs no. 21 and 23 are directed against the extracellular domain of gp185 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs. animals given a combination of the 2 Abs, tumours completely regressed after 11 days.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cellt regions in 28pp; English.

Lie rv fragment encoded by pSCVI was able to proceed infection by HRV-14. It was less active than mod conditions and a Gly-Gly-Gly-Gly-Gly-Ser flexible lift and H chains as either a monomer or a dimer see also R15437-R15442.

Sequence 240 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Single chain
Producing single chain Fv antibody in Escherichia coli - by expression in an inclusion body, followed by protein folding co-expression with a chaperonin as a soluble fraction Claim 4; Page 6-7; 9pp; Japanese.

The sequences given in W25783-84 represent single chain Fv (santibodies which are produced in E.coli. The scFV's are deri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Microbially expressed portions attachment of rhinovirus ligand molecule (ICAM-1)

Using the methods, scFv can be produced in E. coli, either in a soluble fraction or in inclusion bodies. Like the parent double chain antibodies, the scFv polypeptides are useful in immunological diagnosis or for separation and purification, but they lessen the side effects caused by antibody constant regions. The availability of scFv polypeptides contributes to fundamental research and development of diagnostic and therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24-SEP-1997 (first entry)
Single chain anti-Fc gamma RI antibody fused to anti-CEA
Humanised antibody; anti-Fc receptor; H22; bifunctional;
fusion protein; chimera; carcinoembryonic antigen; CEA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chimeric -

A mammalian expression construct encoding a single chain antibody having binding specificity for Fc gamma RI, derived from the humanised anti-Fc gamma RI monoclonal antibody H22 was prepared (see T58129). A bispecific single chain polypeptide was produced by fusing the H22 ScFv to an anti-carcinoembryonic antigen (CEA) antibody. The H22-anti-CEA fusion protein was shown to bind both Fc gamma RI and CEA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Fc gamma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PT a target cell

PS Example 8; Fig 40; 57pp; English.

CC This sequence represents the construct 321, which is a fusion between an CC anti-CEA antibody and a multispecific single chain antibody designated CC 422. The antibody can be used in the method of the invention for inducing CC antibody-dependent cellular cytotoxicity (ADCC) against a tumour cell CC which is characterised by overexpression of HER 2/neu or epidermal growth CC factor receptor (EGFR), comprises contacting the tumour cell with a CC multispecific protein molecule (preferably a single chain antibody) CC comprising: (a) an anti-FC receptor antibody or an antigen binding CC fragment; (b) a portion which binds to HER 2/neu; and (c) a portion which binds to EGFR. The method can be used for treating cancers especially CC breast cancer or ovarian cancer. The multispecific antibody can also CC be administered prophylactically to vaccinate a subject against infection CC by a target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

PPT Single chain polypeptide for binding antigen - comprising light PPT and heavy chain antigen binding portions linked by peptide linker PS Example 9; Figure 39; 78pp; English.

CC The single chain polypeptide is derived from the mature light and CC chain variable region of a monoclonal antibody (MAD) and has affinity CC for a given antigen (Fluorescein). It comprises a first CC chain variable region of an antibody and a second polypeptide comprising the antigen binding portion of of the light CC comprising the antigen binding portion of the heavy chain variable region of an antibody and a second polypeptide comprising the antigen binding portion of the heavy chain variable cregion of an antibody and at least one peptide linker linking the CC first and second polypeptide chains. The resulting single chain CC polypeptide can be used in diagnostics, therapy CC (in vivo and in vitro), imaging, purifications and biosensors. This particular single chain binding molecule was designated CC 18-2-3/TR202' and contains one linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the light and heavy chains of anti-fluorescein monoclonal antibody (Mab) 18-2-3 linked by a peptide designed to fit into a groove on the backside of the variable domain structure. The DNA construct was inserted into vector pGX3703 and introduced into E. coli. 18-2-3/TRY202' was produced as a single chain molecule. It exhibited biological binding activity equivalent in specifically and affinity to that of the original Mab.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            R43679 standard;

Example 9; Fig 39; 78pp; English.

A DNA construct (T13739) codes for single chain binding molecule 18-2-3/TRY202' (R99649), in which VL and VH regions of anti-11 conscein monoclonal antibody 18-2-3 are joined by a peptide 11 linker composed primarily of alternating Gly and Ser residues, with 11 clinker composed primarily of alternating Gly and Ser residues, with 12 clinker composed primarily of alternating Gly and Ser residues, with 13 clinker composed primarily of alternating Gly and Ser residues, with 14 clinker composed primarily of alternating Gly and Ser residues with 15 clinker composed primarily of alternating Gly and Ser residues with 16 clinker composed primarily of alternating Gly and Ser residues with 17 clinker composed in E.coli. Soluble, folded chain antibody (SCA) was 17 conversed in E.coli. Soluble, folded chain antibody (SCA) was 18 capable of exhibiting a biological binding activity 18 cquivalent in specificity and affinity to that of a monoclonal 18 capable of smaller size, greater stability and reduced cost.
                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence was constructed from the variable regions of an antifluorescein MAb, 18-3-2, an IgM. The VL and VH cDNA sequences were synthesised by priming on RNA isolated from hybridona cells. The sequence encodes a single chain binding molecule comprising the variable regions of heavy and light chains linked by peptides. The peptide linker was computer-designed to fit inyo a groove on the backside of the variable domain structure and is composed primarly of alternating Gly and Ser residues. Glu and Lys residues see also R06476-R06484.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               variable region.
